Advanced Search

find this **URL**

between these **dates**
(optional)

Month Day Year
Month Day Year

Other Advanced Search Options

URL Matching

- ☒ Retrieve page that most closely matches search criteria
- ☐ List all pages that match search criteria

Aliases

- ☒ Merge aliases (search results for yahoo.com, www.yahoo.com and yahoo.com/index.html will be merged together)
- ☐ Show aliases separately (a search for yahoo.com will list www.yahoo.com separately)
- ☐ Don't show aliases (a search for yahoo.com will not show www.yahoo.com)

Redirects

- ☒ Hide redirects (on the search results, we will not display pages that redirect to other pages)
- ☐ Flag redirects (on the search results, we will mark all pages that redirect to another page with an 'r')
- ☐ Show redirects (on the search results, we will display pages that redirect)

File Types

Will only display files of the type you specify

Duplicates

- ☐ Show duplicates (if we have 20 identical versions of a page on the same day, we will show them all)

Comparison

- ☐ Show checkboxes to allow comparison of 2 versions of a page. Comparison technology provided by [Docucomp](#).

Convert to PDF

- ☐ **(BETA)** Provide links to a service that will convert a version of a web page to PDF format. Conversion technology provided by [2Convert](#).

Advanced URL locator hints and tips

There are a number of easy URL-based queries for conducting Advanced Searches on the documents in the Wayback Machine. To conduct these Advanced Searches, simply enter the following URLs in your browser's location or address bar.

Retrieving the most recently archived copy of a specific URL

<http://web.archive.org/http://www.cnet.com>

where "http://www.cnet.com" is the target URL. This query returns the most recently archived version of that target URL in the archive.

Retrieving an archived copy of a specific URL from given date

<http://web.archive.org/20011007203917/http://www.cnet.com>

This returns a specific document whose URL matches the target URL and whose archive date most closely matches the date specified in the format YYYYMMDDhhmmss. In the example above, this returns www.cnet.com archived on October 7, 2001 at 8:39pm and 17 seconds.

The date need not be specified to the second. Using a truncated date will return an archived page that most closely matches the average value of the date specified.

Example of truncating to the Year

<http://web.archive.org/2000/http://www.cnet.com>

This returns the document whose URL exactly matches <http://www.cnet.com> and whose archival date most closely matches July 1, 2000 (July 1 is the middle of the year or the "average value" of the year 2000).

Example of truncating to the Year and Month

<http://web.archive.org/200010/http://www.cnet.com>

This returns the document whose URL exactly matches <http://www.cnet.com> and whose archival date most closely matches October 15, 2000 (the 15th is the middle of October or the "average value" of October, 2000).

Searching for all copies of a specific URL archived in a given time period

http://web.archive.org/200109*/http://www.cnet.com

This returns all copies of a specific target URL (e.g. <http://www.cnet.com>) which were archived beginning with the date specified in the format YYYYMMDDhhmmss. In the example above, this returns a list of all archived versions of www.cnet.com archived in September 2001.

Searching for all URLs for a site archived in a given time period

http://web.archive.org/200109*/http://www.cnet.com*

This returns all URLs that begin with <http://www.cnet.com> which were archived in September 2001.
